Mathematical Engineering of Spatial Design

Department of Human and Social Systems
Design-Led X Platform

Architecture

Department of Architecture, Graduate School of Engineering   http://hnm.iis.u-tokyo.ac.jp/
We aim at "fusion of design and engineering" in architectural and urban planning.
Toward this future goal, we are conducting the following research in recent years:
(1) Development of new spatial analysis methods for architectural and urban design
(2) Innovative architectural and urban design driven by the developed spatial analysis methods
(3) Urban analysis using geographic big-data
(4) Theoretical research on facility allocation and urban growth based on behavioral choice model
(5) Activities of "Design-Led X"

Room shape optimization

Planning based on network analysis

Architectural design

Optimal allocation problem

Urban analysis using big-data

Design of changeable space

Spatial analysis using 3D isovist

Quantification of spatial experience

Activities of "Design-Led X"

Institute of Industrial Science, The University of Tokyo
