### LIMMS: A joint laboratory between France and Japan

LIMMS is a joint research unit, between the Institute of Engineering and Systems Science of CNRS and IIS, established in 1995. LIMMS welcomes CNRS researchers, post doctoral fellows supported by JSPS and CNRS, PhD and internship students. Since 1995, more than 380 researchers were hosted. Since 2011 to 2016, LIMMS and his EUJO-LIMMS extension became the European Commission's first international laboratory in Japan. In June 2014, SMMIL-E laboratory as a mirror site of LIMMS was launched in Lille.

LIMMS is currently pursuing a number of collaborative projects, including the JSPS Core-to-Core project in BioMEMS, the CREST project (JST) on energy harvesting and the French national PEPR project (ANR-PIA) on DNA storage.
